Noncovalent Functionalization of Carbon Nanotubes: Fundamental Aspects of Dispersion and Separation in Water (Springer Theses) By Claudia Backes

In this thesis, Claudia Backes guides the reader through her multidisciplinary research into the non-covalent functionalization of carbon nanotubes in water. Although one of the most remarkable materials of the 21st century, carbon nanotubes often have limited application because of their intrinsically low solubility and polydispersity. The author shows that rational surfactant design is a powerful tool for chemists because it can unmask the key to solubilization and allow us to tailor nanotube surface and optical properties in a fully reversible fashion. Aspects of organic, physical and analytical chemistry, as well as colloidal sciences are covered in this outstanding work which brings us one step closer to exploiting this super-material to its full potential.

Editorial Review

From the Back Cover

In this thesis, Claudia Backes guides the reader through her multidisciplinary research into the non-covalent functionalization of carbon nanotubes in water. Although one of the most remarkable materials of the 21st century, carbon nanotubes often have limited application because of their intrinsically low solubility and polydispersity. The author shows that rational surfactant design is a powerful tool for chemists because it can unmask the key to solubilization and allow us to tailor nanotube surface and optical properties in a fully reversible fashion. Aspects of organic, physical and analytical chemistry, as well as colloidal sciences are covered in this outstanding work which brings us one step closer to exploiting this super-material to its full potential.

Users Review

From reader reviews:

Barbara Marburger:

Book is to be different for each and every grade. Book for children till adult are different content. As you may know that book is very important for us. The book Noncovalent Functionalization of Carbon Nanotubes: Fundamental Aspects of Dispersion and Separation in Water (Springer Theses) seemed to be making you to know about other understanding and of course you can take more information. It is extremely advantages for you. The guide Noncovalent Functionalization of Carbon Nanotubes: Fundamental Aspects of Dispersion and Separation in Water (Springer Theses) is not only giving you a lot more new information but also to get your friend when you feel bored. You can spend your own spend time to read your book. Try to make relationship using the book Noncovalent Functionalization of Carbon Nanotubes: Fundamental Aspects of Dispersion and Separation in Water (Springer Theses). You never sense lose out for everything in the event you read some books.

Pamela Garcia:

Are you kind of hectic person, only have 10 or even 15 minute in your day time to upgrading your mind proficiency or thinking skill also analytical thinking? Then you are receiving problem with the book as compared to can satisfy your short time to read it because pretty much everything time you only find reserve that need more time to be read. Noncovalent Functionalization of Carbon Nanotubes: Fundamental Aspects of Dispersion and Separation in Water (Springer Theses) can be your answer as it can be read by anyone who have those short spare time problems.

Barbara Baker:

The book untitled Noncovalent Functionalization of Carbon Nanotubes: Fundamental Aspects of Dispersion and Separation in Water (Springer Theses) contain a lot of information on the idea. The writer explains your ex idea with easy approach. The language is very clear to see all the people, so do certainly not worry, you

can easy to read that. The book was written by famous author. The author gives you in the new time of literary works. It is possible to read this book because you can keep reading your smart phone, or program, so you can read the book throughout anywhere and anytime. In a situation you wish to purchase the e-book, you can wide open their official web-site as well as order it. Have a nice study.

James Chapman:

Many people spending their time period by playing outside having friends, fun activity using family or just watching TV all day long. You can have new activity to spend your whole day by examining a book. Ugh, ya think reading a book can definitely hard because you have to take the book everywhere? It fine you can have the e-book, bringing everywhere you want in your Mobile phone. Like Noncovalent Functionalization of Carbon Nanotubes: Fundamental Aspects of Dispersion and Separation in Water (Springer Theses) which is keeping the e-book version. So , try out this book? Let's notice.
