Mathematical Mindsets: Unleashing Students' Potential through Creative Math, Inspiring Messages and Innovative Teaching By Jo Boaler

Banish math anxiety and give students of all ages a clear roadmap to success

Mathematical Mindsets provides practical strategies and activities to help teachers and parents show all children, even those who are convinced that they are bad at math, that they can enjoy and succeed in math. Jo Boaler—Stanford researcher, professor of math education, and expert on math learning—has studied why students don't like math and often fail in math classes. She's followed thousands of students through middle and high schools to study how they learn and to find the most effective ways to unleash the math potential in all students.

There is a clear gap between what research has shown to work in teaching math and what happens in schools and at home. This book bridges that gap by turning research findings into practical activities and advice. Boaler translates Carol Dweck's concept of 'mindset' into math teaching and parenting strategies, showing how students can go from self-doubt to strong self-confidence, which is so important to math learning. Boaler reveals the steps that must be taken by schools and parents to improve math education for all. *Mathematical Mindsets*:

- Explains how the brain processes mathematics learning
- Reveals how to turn mistakes and struggles into valuable learning experiences
- Provides examples of rich mathematical activities to replace rote learning
- Explains ways to give students a positive math mindset
- Gives examples of how assessment and grading policies need to change to support real understanding

Scores of students hate and fear math, so they end up leaving school without an understanding of basic mathematical concepts. Their evasion and departure hinders math-related pathways and STEM career opportunities. Research has shown very clear methods to change this phenomena, but the information has been confined to research journals—until now. *Mathematical Mindsets* provides a proven, practical roadmap to mathematics success for any student at any age.

PRAISE FOR MATHEMATICAL MINDSETS

"Mistakes, struggles, creativity, beauty, flexibility, equity—Jo Boaler uses these words to describe a vision of mathematics where every student thrives and becomes a mathematical thinker. By following Boaler's roadmap, perhaps we can once and for all lay to rest decades of archaic and destructive notions about what it takes to be good at math."

—**Cathy Seeley**, Past President, National Council of Teachers of Mathematics and author of *Faster Isn't Smarter* and *Smarter Than We Think*

"Jo Boaler is justifiably tired of all the uninformed BS about math education. Too many children's lives are being harmed. In this book, she takes the gloves off and comes out fighting. Her weapon? Scientific data. Lots of it. A readable, engaging, compelling case for revolutionizing math education. Ignore her message and you (or your children, or your students) will be locked out of much of the 21st Century."

—**Dr. Keith Devlin**, Stanford University mathematician, NPR "Math Guy," and author of *Mathematics Education for a New Era*

"Jo Boaler calls out the mindsets that can cripple a student's aptitude for math and ways to change them. More than just a replacement set of positive messages, Jo's book elaborates practical, research-tested strategies for teaching, assessment, practice, and homework—all to help a student learn and love to learn mathematics."

—**Dan Meyer**, former math teacher, Chief Academic Officer at Desmos, author, and consultant

Scores of students hate and fear math, so they end up leaving school without an understanding of basic mathematical concepts. How can we help all children know that they have vast mathematics potential? How can teachers instruct in a way that brings this belief to life?

Drawing on her extensive research with thousands of students, author Jo Boaler reveals how teachers, parents, and other caregivers can transform children's ideas and experiences of math through a positive growth mindset method. Filled with illustrative examples, *Mathematical Mindsets* is an important guide to the information, techniques, and activities that can be put in place to make math more enjoyable and achievable for all students. *Mathematical Mindsets* shows how the entire approach to math teaching and learning—from paying attention to the math questions and reviewing the tasks students work on to the methods teachers and parents use to encourage or grade students—needs to be changed to help students realize the joys of learning and understanding math.

About the Author

DR. JO BOALER is a professor of mathematics education at Stanford University. The author of seven books and numerous research articles, she serves as an advisor to several Silicon Valley companies and is a White House presenter on girls and STEM (Science, Technology, Engineering, and Math). She is a regular

contributor to news and radio in the United States and England and recently formed youcubed.org to give teachers and parents the resources and ideas they need to inspire and excite students about mathematics.

From reader reviews:

James Brown:

Do you have favorite book? In case you have, what is your favorite's book? Book is very important thing for us to know everything in the world. Each publication has different aim or perhaps goal; it means that guide has different type. Some people really feel enjoy to spend their time to read a book. They can be reading whatever they acquire because their hobby is actually reading a book. Consider the person who don't like reading through a book? Sometime, particular person feel need book once they found difficult problem or maybe exercise. Well, probably you will require this **Mathematical Mindsets: Unleashing Students' Potential through Creative Math, Inspiring Messages and Innovative Teaching**.

Charles Trask:

Have you spare time for the day? What do you do when you have more or little spare time? Sure, you can choose the suitable activity for spend your time. Any person spent their very own spare time to take a stroll, shopping, or went to often the Mall. How about open or perhaps read a book allowed **Mathematical Mindsets: Unleashing Students' Potential through Creative Math, Inspiring Messages and Innovative Teaching**? Maybe it is being best activity for you. You realize beside you can spend your time together with your favorite's book, you can better than before. Do you agree with its opinion or you have additional opinion?

James Vera:

Reading a reserve tends to be new life style in this particular era globalization. With studying you can get a lot of information which will give you benefit in your life. The authors these days always try to improve their ability in writing, they also doing some analysis before they write on their book. One of them is this **Mathematical Mindsets: Unleashing Students' Potential through Creative Math, Inspiring Messages and Innovative Teaching**.

Lois Bottoms:

Beside this kind of **Mathematical Mindsets: Unleashing Students' Potential through Creative Math, Inspiring Messages and Innovative Teaching** in your phone, it could give you a way to get more close to the new knowledge or info. The information and the knowledge you may got here is fresh in the oven so don't always be worry if you feel like an old people live in narrow small town. It is good thing to have **Mathematical**

Mindsets: Unleashing Students' Potential through Creative Math, Inspiring Messages and Innovative Teaching because this book offers for you readable information. Do you oftentimes have book but you do not get what it's about. Oh come on, that will happen if you have this within your hand. The Enjoyable option here cannot be questionable, such as treasuring beautiful island. Techniques you still want to miss that? Find this book and also read it from today!
