Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics) By E.E. Moise

Geometric topology may roughly be described as the branch of the topology of manifolds which deals with questions of the existence of homeomorphisms. Only in fairly recent years has this sort of topology achieved a sufficiently high development to be given a name, but its beginnings are easy to identify. The first classic result was the SchOnflies theorem (1910), which asserts that every 1-sphere in the plane is the boundary of a 2-cell. In the next few decades, the most notable affirmative results were the "Schonflies theorem" for polyhedral 2-spheres in space, proved by J. W. Alexander [Ad, and the triangulation theorem for 2-manifolds, proved by T. Rad6 [Rd. But the most striking results of the 1920s were negative. In 1921 Louis Antoine [A] published an extraordinary paper in which he 4 showed that a variety of plausible conjectures in the topology of 3-space were false. Thus, a (topological) Cantor set in 3-space need not have a simply connected complement; therefore a Cantor set can be imbedded in 3-space in at least two essentially different ways; a topological 2-sphere in 3-space need not be the boundary of a 3-cell; given two disjoint 2-spheres in 3-space, there is not necessarily any third 2-sphere which separates them from one another in 3-space; and so on and on. The well-known "horned sphere" of Alexander [A] appeared soon thereafter.

Editorial Review

Users Review

From reader reviews:

Linda Haag:

As people who live in the actual modest era should be upgrade about what going on or details even knowledge to make them keep up with the era which can be always change and advance. Some of you maybe will update themselves by reading through books. It is a good choice to suit your needs but the problems coming to you actually is you don't know what type you should start with. This Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics) is our recommendation to cause you to keep up with the world. Why, because this book serves what you want and need in this era.

Corey Barksdale:

People live in this new day time of lifestyle always try and and must have the extra time or they will get lot of stress from both everyday life and work. So , if we ask do people have extra time, we will say absolutely yes. People is human not just a robot. Then we question again, what kind of activity do you have when the spare time coming to a person of course your answer will certainly unlimited right. Then do you ever try this one, reading guides. It can be your alternative within spending your spare time, the particular book you have read will be Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics).

Robert Harriman:

Reading a book to get new life style in this yr; every people loves to read a book. When you examine a book you can get a wide range of benefit. When you read ebooks, you can improve your knowledge, because book has a lot of information upon it. The information that you will get depend on what sorts of book that you have read. In order to get information about your research, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, these kinds of us novel, comics, and also soon. The Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics) offer you a new experience in reading through a book.

Elizabeth Johannes:

Don't be worry when you are afraid that this book will probably filled the space in your house, you will get it in e-book method, more simple and reachable. That Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics) can give you a lot of close friends because by you looking at this one book you have factor that they don't and make anyone more like an interesting person. This kind of book can be one of one step for you to get success. This e-book offer you information that possibly your friend doesn't understand,

by knowing more than various other make you to be great folks. So , why hesitate? We should have Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics).
