Resource Wars: The New Landscape of Global Conflict With a New Introduction by the Author By Michael Klare

From the oilfields of Saudi Arabia to the Nile delta, from the shipping lanes of the South China Sea to the pipelines of Central Asia, *Resource Wars* looks at the growing impact of resource scarcity on the military policies of nations.

International security expert Michael T. Klare argues that in the early decades of the new millennium, wars will be fought not over ideology but over access to dwindling supplies of precious natural commodities. The political divisions of the Cold War, Klare asserts, have given way to a global scramble for oil, natural gas, minerals, and water. And as armies throughout the world define resource security as a primary objective, widespread instability is bound to follow, especially in those areas where competition for essential materials overlaps with long-standing territorial and religious disputes. In this clarifying view, the recent explosive conflict between the United States and Islamic extremism stands revealed as the predictable consequence of consumer nations seeking to protect the vital resources they depend on.

A much-needed assessment of a changed world, *Resource Wars* is a compelling look at warfare in an era of rampant globalization and intense economic competition.

Editorial Review

From Publishers Weekly

Klare analyzes the most likely cause of war in the century just begun: demand by rapidly growing populations for scarce resources. An introductory chapter sets the scene, laying out the complexities of rapidly increasing demand as the world industrializes, the concentration of resources in unstable states and the competing claims to ownership of resources by neighboring states. Succeeding chapters look more closely at the potential for conflict over oil in the Persian Gulf and in the Caspian and South China Seas, over water in the Nile Basin and other multinational river systems and over timber, gems and minerals from Borneo to Sierra Leone. The strength of Klare's presentation is its concreteness. His analyses of likely conflicts, for example among Syria, Jordan and Israel for the limited water delivered by the Jordan River, are informed by detailed research into projected usage rates, population growth and other relevant trends. As Klare shows, the same pattern is repeated in dozens of other locations throughout the world. Finite resources, escalating demand and the location of resources in regions torn by ethnic and political unrest all combine as preconditions of war. Klare, an expert on warfare and international security (Rogue States and Nuclear Outlaws, etc.), presents a persuasive case for paying serious attention to these impending hostilities and furnishes the basic information needed to understand their danger and the importance of international cooperation in staving off conflict. (May) Forecast: Klare's message is important, but it probably won't be heard by many beyond readers of the handful of major newspapers that will review it.

In this *tour d'horizon* for prospective wars in the next few decades, Klare identifies the factors and the actors in several contested areas of Africa and Asia. Distancing himself from ruminators like Samuel Huntington, whose *Clash of Civilizations and the Remaking of World Order* (1996) maintained that cultural differences, such as between Muslim and Christian, will drive post-cold war international politics, Klare contends that power struggles over petroleum, water, gems, and timber will be the engines. Indeed, where oil and water are concentrated in Asia and Africa--the Persian Gulf, the Caspian Sea, and the South China Sea in the former; the Nile, Jordan, Tigris-Euphrates, and Indus River regions in the latter--Klare notes marked increases in military activity. Saber sharpening, rattling, and use have their provocations in increasing worldwide demand, driven by economic and population growth, for oil and clean water. Buttressing the text with tables attesting the finitude of both resources, Klare provides needed clarity on and a needed current-affairs summary of the issue. *Gilbert Taylor*
