

# Planning for Sustainability: Creating Livable, Equitable and Ecological Communities

By Stephen M. Wheeler

## Planning for Sustainability: Creating Livable, Equitable and Ecological Communities By Stephen M. Wheeler

How can human communities sustain a long-term existence on a small planet? This challenge grows ever more urgent as the threat of global warming increases.

Planning for Sustainability presents a wide-ranging, intellectually well-grounded and accessible introduction to the concept of planning for more sustainable and livable communities. The text explores topics such as how more compact and walkable cities and towns might be created, how local ecosystems can be restored, how social inequalities might be reduced, how greenhouse gas emissions might be lowered, and how more sustainable forms of economic development can be brought about.

The second edition has been extensively revised and updated throughout, including an improved structure with chapters now organized under three sections: the nature of sustainable planning, issues central to sustainable planning, and scales of sustainable planning. New material includes greater discussion of climate change, urban food systems, the relationships between public health and the urban environment, and international development.

Building on past schools of planning theory, *Planning for Sustainability* lays out a sustainability planning framework that pays special attention to the rapidly evolving institutions and power structures of a globalizing world. By considering in turn each scale of planning—international, national, regional, municipal,

neighborhood, and site and building—the book illustrates how sustainability initiatives at different levels can interrelate. Only by weaving together planning initiatives and institutions at different scales, and by integrating efforts across disciplines, can we move towards long-term human and ecological well-being.

### **Editorial Review**

#### Review

"In a clear, immediate and compelling style, this text offers a stimulating and cutting-edge guide to the challenges that emerged in the past decade, and to new understandings about how planning can be instrumental in shaping a more "liveable, equitable, and ecological" future." Dr Paola Gazzola, Newcastle University, UK.

"Wheeler's fully revised, restructured, and updated 2nd edition provides an excellent base of knowledge on how to plan for more sustainable communities for students, professional planners, and the public. His engaging writing provides a clear understanding of the history, theory, and practice of sustainability planning." Dr Hilary Nixon, San Jose State University, USA.

#### About the Author

Professor Stephen M. Wheeler, Ph.D., AICP is Associate Professor in the Landscape Architecture Program, Department of Human Ecology, at University of California, Davis. His areas of interest include sustainable development, planning for climate change, urban design, and built landscapes of metropolitan regions.
